

Introduction to Graphics Programming and its Applications

繪圖程式設計與應用

Assignment 1

Instructor: Hung-Kuo Chu

Department of Computer Science

National Tsing Hua University

CS4505

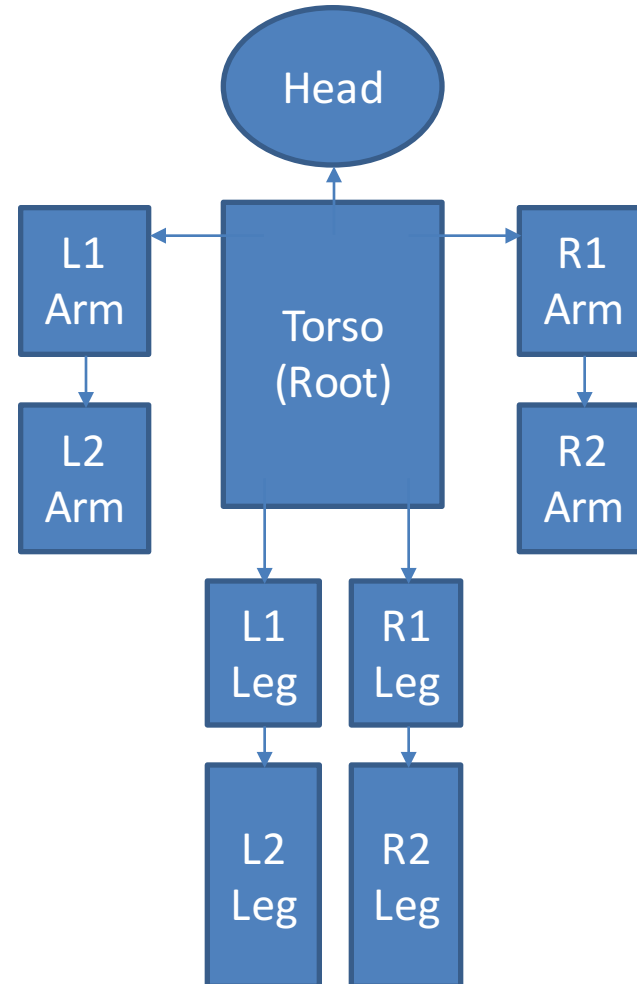

Assignment 1

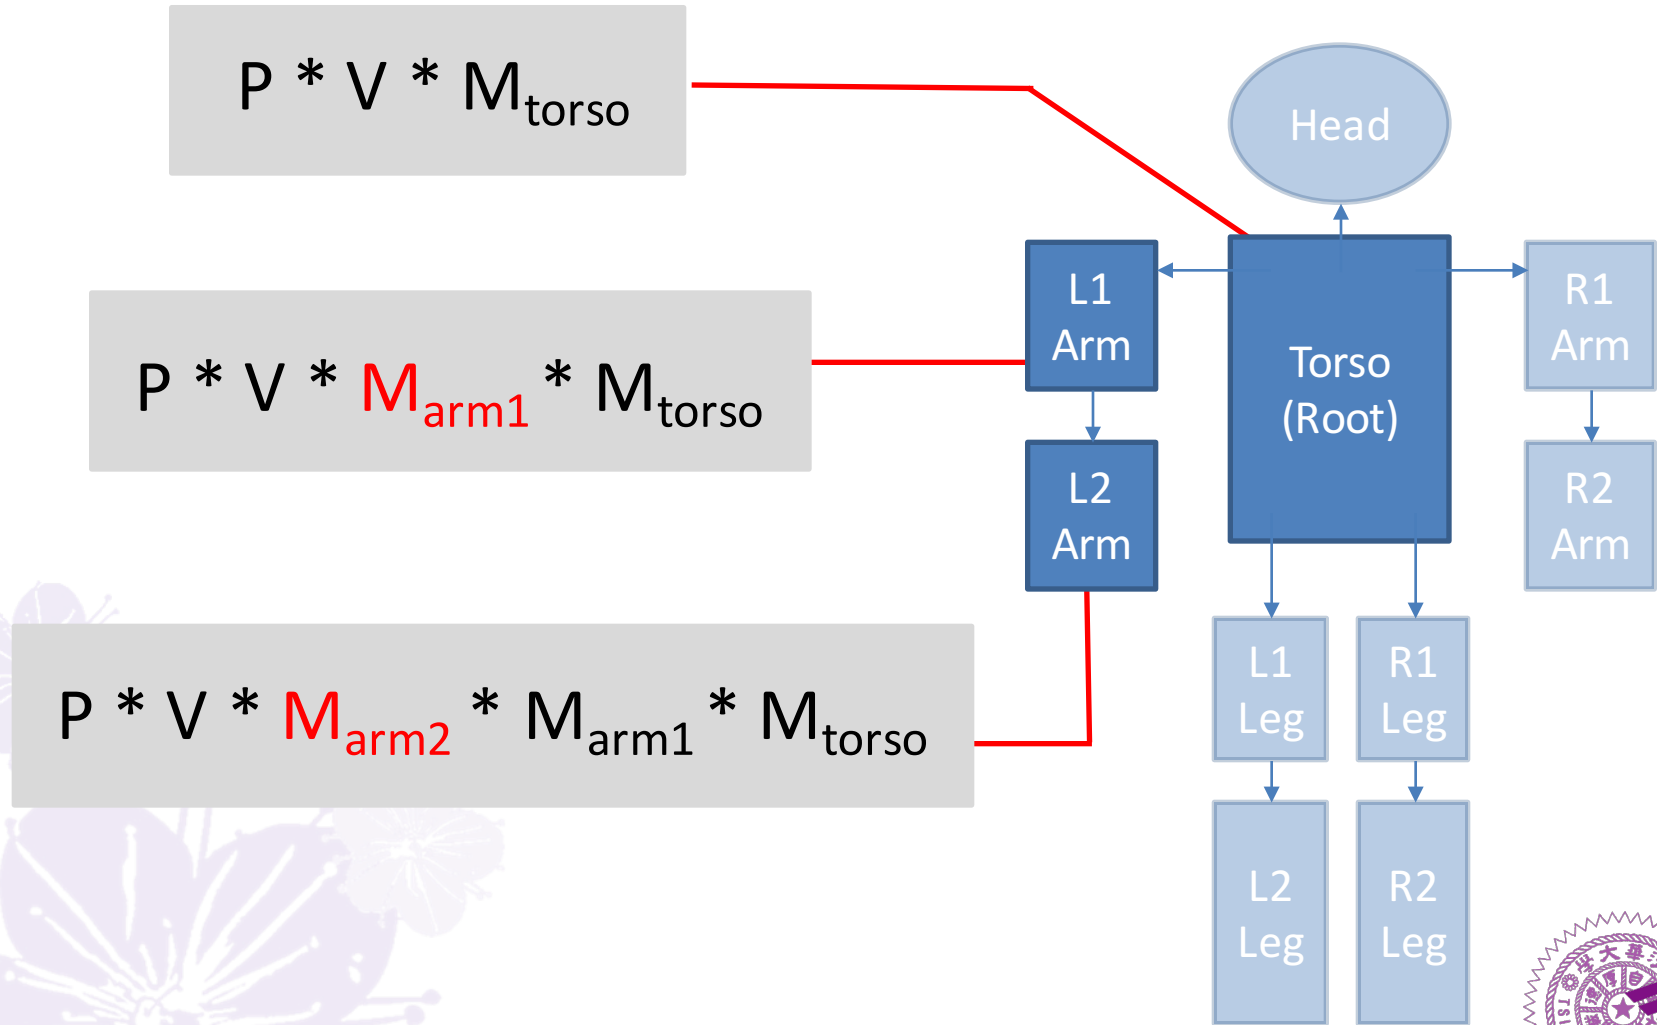

- Design and render an **animated robot** with **OpenGL**

Hierarchy Diagram

Hierarchy Matrix

Assignment 1

- Announce day: 2017/3/20
- **Due day: 2017/4/3 23:59**
- 10% of semester score
- Hand in your homework by iLMS
 - Source code, **please only upload source codes** (.c, .cpp, .h, .hpp, .sln, .vcxproj, makefile, etc.)
 - Windows(with .dll files) / Mac executables
 - name your glut window [學號_AS1]
 - Report in PDF format

Assignment 1

- You get **-10 point** if you use **console input**. No `scanf()`! Please use GLUT menu, keyboard or mouse event instead
- You got **0 points** if you do these:
 - Doesn't use OpenGL **shader pipeline**
 - **Fully copy source code** of the other students
 - Your provided **executable doesn't run**(you can use your laptop to re-demo if this happens)
 - Your program **doesn't use OpenGL**

Assignment 1

- Remind again , you should use **shader pipeline**
- You **can't** use **fixed pipeline** and any **GLUT primitive api** such as
 - *glVertex2f()* , *glTranslatef()* , *glTexCoord2f()* ... etc.
 - *glutSolidCube()* , *glutSolidSphere()* ... etc.
- Don't worry about this if you follow our course slides

Report Format

- Name your file 學號_AS1_Report.pdf
- Required content:
 - 1 screenshot of your window with robot in it
 - The relationship/transformation stack of your robot body parts(example on previous page)
 - Functions in your program/how to use, which IDE and its version do you use, etc.
 - Only 5%, writing a lot won't get you more!

Evaluation

Item	Score
Robot has one cube primitive at least	10%
Robot has a head, a torso, two arms, two legs at least	15%
Robot parts are correctly connected by transformations (diagram)	15%
Animation(1 kind at least) works and it involves all robot body parts	15%
Render works	15%
Use of GLUT menus to start/pause animation or change animation	10%
Use of keyboard/mouse events to manipulate robot rotation/position	10%
Report	5%
Subjective score by teacher and TA	5%

Bonus

Robot has one cylinder primitive at least	5%
Robot has one sphere primitive at least	5%
Use texture on one robot part at least	10%

Example

thank
you!

Question
